pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A_Geneseq_032802:*

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention provides the protein and coding sequences of anti-CD40 antibodies. These can be used in the treatment of cancer and inflammatory and immune system diseases, including systemic lupus erythematosus, scleroderma, inflammatory myositis, Sjogren's syndrome, mixed connective tissue disease, rheumatoid arthritis, multiple
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        sclerosis, inflammatory bowel disease, acute respiratory distress syndrome, pulmonary inflammation, osteoporosis, delayed type hypersensitivity, asthma, primary biliary cirrhosis and idiopathic thrombocytopaenic purpura.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  chain sequence.
                                                                                             The invention provides isolated antibodies, or antigen binding portions, that are capable of binding to human interleukin-18 (IL-18). The antibodies may be used to inhibit human IL-18 activity in, and treat a disorder where IL-18 is detrimental in, a human subject suffering from, inflammatory disorders (e.g., rheumatoid arthritis, Crohn's disease, inflammatory bowel disease, and osteoarthritis), neurological disorders (e.g., Huntington's chorea, Parkinson's disease, Alzheimer's disease, and stroke), heart failure, myocardial infarction, autoimmune diseases such as autoimmune hepatitis and autoimmune neutropaenia, and mental disorders (e.g., depression and schizophrenia). Treatment with an anti-IL-18 antibody may occur before, concurrent, or after administration of a second agent selected from an antibody, or fragment, capable of binding human IL-12 methorrevate anti-timer necrosis faster.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAG65352;

                                                                                                   Query Match
                                                                                                                                                                                       anchored protein. The present invention relates to anti-PSCA antibody composition and methods of killing PSCA-expressing cancer cells. PSCA is useful for inhibiting and killing the growth of PSCA-expressing cancer cells such as prostate cancer, bladder cancer or lung cancer cells. Humanised antibody conjugated to a toxin or a radioactive isotope is used for killing the cancer cells. PSCA is useful for specifically targetting PSCA-expressing tumour cells in vivo and for inhibiting or killing these cancers and for diagnosing and staging of PSCA-expressing cancer, for purification or immunoprecipitation of PSCA from cells, and for detection and quantitation of PSCA in vitro. PSCA DNA is also useful for treating
                                                                                                                                                                                                                                                                                                                                                                            The present sequence is murine prostate stem cell antigen (PSCA) antibody (Ab) heavy chain variable region domain (VH) from hybridoma clone 6B8.LD7.2B3, Asc# 2761. PSCA is a single subunit glycoprotein that is expressed on the cell surface as a glycosylphosphatidylinositol (GPI).

                                                                                                                                                                                                                                                           presence of adipocyte antigen on the surface of an adipocyte to detect or determine the presence or level of adipocytes in a cell or tissue sample. The antibodies can be used as an alternative means of treatment for obese patients other than undergoing surgery to remove excess fat. Antibodies for different types of fat deposits can also be produced e.g. intra-abdominal fat associated with heart disease.
                                                                                                                                                                                                                                                                                                                                                           obesity related diseases. The antibodies can be used to deliver drugs or pro-drugs directly to the fat mass of an obese patient or the antibody can be used as a therapeutic itself. Antibodies binding specifically to adipocytes can be used to activate the immune system to destroy the cells by complement mediated lysis. The antibodies may be labeled with a detectable label such as radiolabel, fluorescent or chemical group and used in methods of diagnosis in human subjects e.g. to determine the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Chimeric - Mus musculus.
                                                                                                                                                                                                      killing PSCA-expressing cancer cells. PSCA is useful for inhibiting and killing the growth of PSCA-expressing cancer cells such as prostate cancer, bladder cancer or lung cancer cells. Humanised antibody conjugated to a toxin or a radioactive isotope is used for killing the cancer cells. PSCA is useful for specifically targetting PSCA-expressing tumour cells in vivo and for inhibiting or killing these cells. The antibodies are also useful for treating the above mentioned cancers and for diagnosing and staging of PSCA-expressing cancer, for purification or immunoprecipitation of PSCA from cells, and for detection and quantitation of PSCA in vitro. PSCA DNA is also useful for treating
                                                                                                                                                                                                                                                                                                                                                                           The present chimeric sequence is full length 2761 antibody binding fragment (Fab) heavy chain (6B8.1D7.2B3) derived from murine heavy chain variable region (VH) and human heavy chain constant region. This antibody binds to prostate stem cell antigen (PSCA) which is a single subunit glycoprotein that is expressed on the cell surface as glycosylphosphatidylinositol (GPI)-anchored protein. The present invention relates to anti-PSCA antibody composition and methods of invention relates to anti-PSCA antibody composition and methods of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WO200140309-A2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Chimeric -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel anti-prostate stem cell antigen (PSCA) antibody that internalizes on binding to PSCA on mammalian cell and inhibits growth of PSCA-expressing cancer cells in vivo, useful for killing PSCA-expressing cancer cells -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         16-FEB-2000; 2000US-0182872.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ABB58739 standard; Protein; 1471 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA discloses genomic DNA sequences (ABL16176-ABL30511).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Drosophila; developmental biology; cell signalling; insecticide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           26-MAR-2002 (first entry)

                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01876-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB7737-ABB72072).
                                                                                                                        heavy chain
                                                                                                                                                                                                                                                                                                                                                          The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

CC Hybridoma antibodies have been produced with the spleen cells of CC BALB/C mouse that had received multiple injections of mercuric ions CC reacted with glutathione to produce a mercuric ion coordinate CC covalent compound which was covalently bound to keyhole limpet CC hemocyanin (KLH). Eight hybridomas (1F10, 4A10, 1C11, 5G4, 23F8, 2D5, CC 5B6 and 3E8) were producing MAbs that were strongly positive against glutathione-mercuric ions but negative against glutathione CC without mercuric ions. RNA was isolated from hybridoma cells with CG guanidine isothiocyanate. First strand cDNA synthesis was catalysed by Mulv reverse transcriptase. The primers used for cDNA synthesis of the CG were complementary to the 5' end of the CH1 domain of the heavy CC chain expressed by the hybridoma of interest, or to the 5' and of CC chain expressed by the hybridoma of interest, or to the 5' and of CC wariable region of a particular antibody polypeptide was also used CC variable region primer used for cDNA synthesis of the CC wariable region primer. In addition, the VH primer AAQ97518 CC an appropriate v-region primer. In addition, the VH primer AAQ97518 CC an appropriate v-region primer. In addition, the VH primer AAQ97518 CC of the PCR amplification of that variable region. In conjunction with CC an appropriate v-region primer. In addition, the VH primer AAQ97518 CC of the PCR amplified nucleotides were determined. These are given CC AAR78970-R78971. The descriptions of the SEQ ID nos given on pp 44-45 cc sequence listings. The descriptions in the sequence listings are
                                                                                                                                                                                                                                                                                                                                                                                                                        Primer; PCR; amplify; human; immunoglobulin; variable; heavy chain; cosmid; placenta; vector; pJB81; E.coli; mammalian.

The genes (AAQ78939-79002) were isolated and cloned from a series of cosmid constructs: Y202; Y103; Y21; Y6;Y24; 3-31; M84; M118 and M131, by PCR constructs: Y202; Y103; Y21; Y6;Y24; 3-31; M84; M118 and M131, by PCR amplification using primers AAQ78917-38. The genes are subdivided into 5 families of vh genes. The fragments cover a region of 800 kb. The DNA fragments were isolated from high molecular weight DNA from human placenta. The DNA was partially digested with TaqI restriction enzyme. The fragments were separated by gel elecrophoresis and 35-45 kb fractions were collected. The fragments were ligated with ClaI-digested cosmid vector DJB81. The ligation products were in vitro packed and infected into E. coli 490A. The fragments were then subcloned by colony hybridisation. The Vh genes and the DNA fragments encoding them are
                                                                                                                                                                                          07-JUN-1995;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This represents the amino acid sequence of the light chain variable region of human antibody clone Amu 5-3. This is used to construct a humanised antibody LO-CD2a. The invention relates to the use of the monoclonal antibody (MAD) LO-CD2a or a humanised or a chimeric version of the LO-CD2a antibody for the inhibition of a T-cell mediated immune response in a patient. The MAD LO-CD2a (produced by hybridoma cell line ATCC HB 11423) can bind to an epitope on the CD2 antigen of the human lymphocytes. The T-cell mediated immune response in a patient can be than bited by administering the MAD LO-CD2a or an antibody that binds to the same human lymphocyte epitope as LO-CD2a. The method is used for preventing transplant rejection or for treating graft-versus-host
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            preventing transplant rejection or for treat disease or for treating autoimmune diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Example 7; Fig 33; 96pp; English
                           This invention describes a novel antibody specifically recognizing phosphatidylinositol-3,4,5-triphosphate (PIP3). The antibody of the invention is used in immunogenic compositions in which a dead salmonella genus microbe is used as an adjuvant and mixed with PIP3. The antibody can be used in an immunoassay containing a step in which the above antibody or its variable region is reacted with PIP3 present in a sample and the bond based on their immunological reaction. The method can determine PIP3 easily in a high sensitivity. This sequence represents
                                                                                                                                                                                                                         A monoclonal antibody recognizing phosphatidylinositol-3,4,5-triphosphate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             PIP3; phosphatidylinositol-3,4,5-triphosphate; variable region;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Murine PIP3 recognizing Mab variable region heavy chain protein

                                                                                 The present sequence is a human anti-tumour antigen monoclonal antibody (MAb) heavy chain variable region, useful in medicine, pharmacology and biochemistry. The isotype of a MAb secreted by the human/human hybridoma HT was determined to be mu and kappa. Human MAb was purified, and the antigen recognised by human MAb CLN"-igM identified by western blotting.

Title: Perfect score: US-09-780-035-9 37 1 TGYYIH 6

Scoring table:

BLOSUM62 Gapop 10.0 , Gapext 0.5

Searched: 105224 seqs, 38719550 residues

number of hits satisfying chosen parameters:

105224

Minimum DB seq length: 0
Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

Database : SwissProt\_40:\*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               as autoimmune hepatitis and autoimmune neutropaenia, and mental disorders (e.g., depression and schizophrenia). Treatment with an anti-IL-18 antibody may occur before, concurrent, or after administration of a second agent selected from an antibody, or fragment, capable of binding human IL-12, methotrexate, anti-tumor necrosis factor, corticosteroids, cyclosporin, rapamycin, FK506, and non-steroidal anti-inflammatory agents. The present sequence represents an anti-IL-18 antibody variable
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ghayur T,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                The invention provides isolated antibodies, or antigen-binding portions, that are capable of binding to human interleakin-18 (IL-18). The antibodies may be used to inhibit human IL-18 activity in, and treat a disorder where IL-18 is detrimental in, a human subject suffering from, inflammatory disorders (e.g., rheumatoid arthritis, Crohn's disease, inflammatory bowel disease, and osteoarthritis), neurological disorders (e.g., Huntington's chorea, Parkinson's disease, Alcheimer's disease, and the control of the c

                                                                       This represents the amino acid sequence of the light chain variable region of human antibody clone Amu 5-3. This is used to consruct a humanised antibody LO-CD2a. The invention relates to the use of the monoclonal antibody (MAD) LO-CD2a or a humanised or a chimeric version of the LO-CD2a antibody for the inhibition of a T-cell mediated immune response in a patient. The MAD LO-CD2a (produced by hybridoma cell line ATCC HB 11423) can bind to an epitope on the CD2 antigen of the human lymphocytes. The T-cell mediated immune response in a patient can be inhibited by administering the MAD LO-CD2a or an antibody that binds to the same human lymphocyte epitope as LO-CD2a. The method is used for preventing transplant rejection or for treating graft-versus-host disease or for treating autoimmune diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                07-JUN-1995;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Best Local Similarity
                                                                                                                                                    Hepatitis B virus (HBV) is responsible for hepatitis infection in humans, which may progress to liver cirrhosis or cancer. One of HBV's surface antigens is pre-S1. Monoclonal antibodies specific for pre-S1 antigen may efficiently neutralise HBV. The present invention relates to humanised antibodies specific for HBV surface antigen pre-S1. The humanised antibodies are useful for preventing HBV infection and for treating chronic hepatitis B. The Complementarity Determining Regions of mouse pre-S1 antibody KR127 were grafted onto human antibody to produce the humanised antibodies of the present invention. The present sequence the humanised antibodies of the present invention. The present sequence is the business of the present invention.
                                                                                   Sequence
                                                                                                          is the humanised pre-S1 antibody HKR127HC(I) heavy chain variable region (VH). The coding sequence for the present sequence was produced from the coding sequence of the mouse pre-S1 antibody VH sequence (AAA62115).
                                                                                                                                                                                                                                                                                                                                                               Humanized antibody specific for hepatitis B virus surface antigen pre-S1, containing humanized heavy and light chain regions, useful preventing hepatitis B virus (HBV) infection and for treating chron

                                                                                                                                                                                                                                                                                                                                                           Hepatitis B virus (HBV) is responsible for hepatitis infection in humans, which may progress to liver cirrhosis or cancer. One of HBV's surface antigens is pre-S1. Monoclonal antibodies spec.:fic for pre-S1 antigen may efficiently neutralise HBV. The present invention relates to humanised antibodies specific for HBV surface antigen pre-S1. The humanised antibodies are useful for preventing HBV infection and for treating chronic hepatitis B. The Complementarity Determining Regions of mouse pre-S1 antibody KR127 were grafted onto human antibody to produce the humanised antibodies of the present invention. The present sequence is the humanised pre-S1 antibody HRR127HC(III) heavy chain variable region (VH). The coding sequence for the present sequence was produced from the coding sequence of the mouse pre-S1 antibody VH sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Hepatitis B virus (HBV) is responsible for hepatitis infection in humans, which may progress to liver cirrhosis or cancer. One of HBV's surface antigens is pre-S1 Monoclonal antibodies specific for pre-S1 antigen may efficiently neutralise HBV. The present invention relates to humanised antibodies specific for HBV surface antigen pre-S1. The humanised antibodies are useful for preventing HBV infection and for treating chronic hepatitis B. The Complementarity Determining Regions of mouse pre-S1 antibody KR127 were grafted onto human antibody to produce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 mouse pre-S1 antibody KR127 were grafted onto human antibody to produce the humanised antibodies of the present invention. The present sequence is the humanised pre-S1 antibody HKR127HC(II) heavy chain variable region (VH). The coding sequence for the present sequence was produced from the coding sequence of the mouse pre-S1 antibody (AAA62115).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Humanized antibody specific for hepatitis B virus surface antigen pre-S1, containing humanized heavy and light chain regions, useful for preventing hepatitis B virus (HBV) infection and for treating chronic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           sequences of anti-adipocyte monoclonal antibody heavy chain, light chain, and heavy chain complementarity determining regions (CDR) of the invention. The antibodies can be used in the treatment of obesity and cobesity related diseases. The antibodies can be used to deliver drugs or can be used as a therapeutic itself. Antibodies binding specifically to adipocytes can be used to activate the immune system to destroy the cells by complement mediated lysis. The antibodies may be labeled with a cused in methods of diagnosis in human subjects e.g. to determine the presence or level of adipocytes of an alternative means of treatment for obese patients other than undergoing surgery to remove excess fat. Antibodies can be used to activate the immune system to determine the cells complement mediated lysis. The antibodies may be labeled with a complement mediated lysis in human subjects e.g. to determine the collistic of the surface of an adipocyte to detect or determine the presence or level of adipocytes in a cell or tissue sample. The antibodies can be used as an alternative means of treatment for obese complements other than undergoing surgery to remove excess fat. Antibodies can be used as an alternative means of treatment for obese complements other than undergoing surgery to remove excess fat. Antibodies can be used as an alternative means of treatment for obese complements of the complement complements of the complement complements of the complements of

                                                                                                                             generally applicable in humanisation of mouse antibodies. The resulting humanised antibodies may be used e.g. as antitumour agents. They retain the antigen recognition of the original antibody, but are not immunogenic in humans.
                                                                                                                                                                                complementarity determining region, canonical structure or Vernier zone are modified to reduce immunogenicity in humans to produce a humanised antibody. This method, which involves the introduction only a few point mutations into T-cell epitope coding regions, is
                                                                                                                                                                                                                                           The sequence represents a humanised mutant form of a heavy chain variable region from monoclonal antibody IOR-83, specific for epidermal growth factor receptor and originally isolated from a mouse hybridoma. The native antibody framework sequence (AAR92990) analysed for T-cell antigenic sequences using a computer algorithm, and compared with human Ig sequences. The human Ig with highest homology (e.g. AAR92991) is isolated, and residues not within a

The framework sequence is analysed for T-cell antigenic sequences using a computer algorithm, and compared with human Ig sequences. The human Ig with highest homology (AAR92991) is isolated, and residues not within a complementarity determining region, canonical structure or vernier zone are modified to reduce immunogenicity in humans (e.g. in sequence AAR92992). This method, which involves the introduction of sequence AAR92992).

                                                                                                      AAU02501-AAU02635, and AAU02641-AAU02748 represent the amino acid sequences of anti-adipocyte monoclonal antibody heavy chain, light chain, and heavy chain complementarity determining regions (CDR) of the invention. The antibodies can be used in the treatment of obesity and obesity related diseases. The antibodies can be used to deliver drugs or pro-drugs directly to the fat mass of an obese patient or the antibody can be used as a therapeutic itself. Antibodies binding specifically to be complement mediated lysis. The antibodies binding specifically to be complement mediated lysis. The antibodies may be labeled with a detectable label such as radiolabel, fluorescent or chemical group and used in methods of diagnosis in human subjects e.g. to determine the presence of adipocyte antigen on the surface of an adipocyte to detect or
                              patients other than undergoing surgery to remove excess for different types of fat deposits can also be produced abdominal fat associated with heart disease.
                                                                             determine the presence or level of adipocytes in a cell or tissue sample. The antibodies can be used as an alternative means of treatment for obese

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  generally applicable in humanisation of mouse antibodies. The resulting humanised antibodies may be used e.g. as antitumour agen They retain the antigen recognition of the original antibody, but not immunogenic in humans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (CAMB-) CAMBRIDGE ANTIBODY TECHNOLOGY

                                                                                                                                                                                                              chain sequences encoded by novel isolated genes. The genes (AAQ78939-79002) were isolated and cloned from a series of cosmid constructs: Y202; Y103; Y21; Y6;Y24; 3-31; M84; M118 and M131, by PCR amplification using primers AAQ78917-38. The genes are subdivided into families of Vh genes. The fragments cover a region of 800 kb. The DNA fragments were isolated from high molecular weight DNA from human placenta. The DNA was partially digested with TaqI restriction enzyme. The fragments were separated by gel elecrophoresis and 35-45 kb fractions were collected. The fragments were ligated with ClaI-digested cosmid vector DJB81. The ligation products were in vitro packed and infected into E.coli 490A. The fragments were then subcloned by colony hybridisation. The Vh genes and the DNA fragments encoding them are useful in producting human immunoglobulin in mammalian hosts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Primer; PCR; amplify; human; immunoglobulin; variable; heavy chain;
